

Pievox APPLICATION for B67 Remote Adapter for Studer B67 MKI und MKII

Using this interface it is possible to use the Revox B77 cable remote or the Revox infrared control B202/B203 together with B201, B205 or B208 to control the Studer B67. Controlled functions are Fast forward, Rewind, Play, Record, and Stop.

The interface box fits directly on top of the B67 to the remote connector positioned to cover the speed connector (which is used very rarely) and so doesn't block the ventilation grille (see picture).

If you want to use the speed control facility on the B67 and need to have access to the speed connector it would be possible to produce the interface to your wishes – specially built with a rotated remote connector in an interface box to enable both remote and speed control.

This interface for Studer B67 MKI and MKII works in conjunction with the following Revox and Pievox accessories:

- Revox B77 / PR99 cable remote, also the allowing the Auto Rec. function.
- Revox B202 IR-receiver.
- Revox B203 Commander on 9-pol. parallel control socket for B77/PR99.
- Pievox Autostart module for automatical record starting after 5 sec security delay.

Using the the interface with the autostart module and using Auto-Rec please don't forget to cancel this function as not to accidentally delete the tape when starting!!
